DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-14, and 18-20, drawn to a method differentiating at least one service class in a kernel to perform service differentiation based on content in at least one data packet, including the steps of capturing at least one data packet until a complete application header is detected, parsing said complete application header to determine at least one application tag, matching said at least one application tag to at least one matching rule, determining a presence of at least one match with said at least one matching rule, and performing service differentiation action based on said at least one matching rule, classified in class 709, subclass 227.
 - II. Claims 15-17, and 21, drawn to an apparatus including a policy agent including a communicator to communicate from a user space to a kernel with an application interface, an initializer to instantiate service differentiation rules for an application tag within the kernel which includes a classification and action rules, a manager to delete and update rules on a user request, classified in class 709, subclass 224.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 2143

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as a method differentiating at least one service class in a kernel to perform service differentiation based on content in at least one data packet, including the steps of capturing at least one data packet until a complete application header is detected, parsing said complete application header to determine at least one application tag, matching said at least one application tag to at least one matching rule, determining a presence of at least one match with said at least one matching rule, and performing service differentiation action based on said at least one matching rule, but lacks an apparatus including a policy agent including a communicator to communicate from a user space to a kernel with an application interface, an initializer to instantiate service differentiation rules for an application tag within the kernel which includes a classification and action rules, a manager to delete and update rules on a user request. Invention II has separate utility such as an apparatus including a policy agent including a communicator to communicate from a user space to a kernel with an application interface, an initializer to instantiate service differentiation rules for an application tag within the kernel which includes a classification and action rules, a manager to delete and update rules on a user request, but lacks a method differentiating at least one service class in a kernel to perform service differentiation based on content in at least one data packet, including the steps of capturing at least one data packet until a

complete application header is detected, parsing said complete application header to determine at least one application tag, matching said at least one application tag to at least one matching rule, determining a presence of at least one match with said at least one matching rule, and performing service differentiation action based on said at least one matching rule. See MPEP § 806.05(d).

- 3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
- 4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
- 5. Group I search (Claims 1-14, and 18-20) would require use of search of class 709, subclass 227 (which would not be required for Group II).
- 6. Group II search (Claims 15-17, and 21) would require use of search of class 709, subclass 224 (which would not be required for Group I).

Art Unit: 2143

7. A telephone call was made to Louis Herzberg on January 26, 2005 to request an oral election to the above restriction requirement, but did not result in an election being made. Messages were left however no response was received.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

8. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph E. Avellino whose telephone number is (571) 272-3905. The examiner can normally be reached on Monday-Friday 7:00-4:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A. Wiley can be reached on (571) 272-3923. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
